This report is the international pr Authority under Article 35 and to			ternational Preliminary Examining					
2. This REPORT consists of a total	of 3 sheets, in	cluding this cover she	eet.					
3. This report is also accompanied	by ANNEXES, comprising:							
a. (sent to the applicant ar	nd to the International Bureau)							
sheets of the de	scription, claims and/or drawing	ngs which have been	amended and are the basis for this report					
	and/or sheets containing rectifications authorized by this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions).							
sheets which sup	persede earlier sheets, but which	ch this Authority cons	iders contain an amendment that goes					
		ication as filed, as ind	licated in item 4 of Box No. 1 and the					
Supplemental Be		icate type and number	of electronic carrier(s))					
b. (sent to the International Bureau only) a total of (indicate type and number of electronic carrier(s)) containing a sequence listing and/or tables related thereto, in computer readable form only, as indicated in the								
Supplemental Box rela	ting to Sequence Listing (see S	Section 802 of the Ad	ministrative Instructions).					
4. This report contains indications relating to the following items:								
Box No. 1 Basis of th	e report							
Box No. 11 Priority								
		d to novelty, inventiv	e step and industrial applicability					
Box No. IV Lack of unity of invention								
Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement								
Box No. VI Certain documents cited								
Box No. VII Certain defects in the international application								
Box No. VIII Certain observations on the international application

2. Citations and explanations (Rule 70.7)

Industrial applicability (IA)

1. Reference is made to the following documents:

Claims

D1: US 05886986 A D2: JP 11191703 A

- 2. Claims of the present invention relate to a duplexer having a matrix structure comprising: a dual duplexing means including a transmitting input unit, a receiving input unit, a transmitting output unit and a receiving output unit, wherein the above devices are used in common and connected in the form of a matrix.
- 3. D1 relates to a duplexer having dual coupler line characteristics improvingly damping the signal of receiving frequency with a small number of resonators and without an external device. D2 relates to an apparatus and method for obtaining a small-sized dual-band dielectric filter and a dielectric duplexer with a built-in resonator independently designed in each mode.
- 4. However, D1 & D2 do not have the characteristics of the present invention. More specifically, none of the prior arts teach or fairly suggest the claimed dual duplexer having matrix structure of the claimed invention, where the transmission input and receiving input, the transmission output and receiving output use a common port, and are connected with each other in a matrix structure.
- 5. It is thus believed that Claims 1-7 meet the criteria set out in PCT Article 33(2)-(4). The prior arts D1 & D2 do not teach or fairly suggest any of the specially set forth points in the claims.

Therefore, Claims 1-7 are considered to be novel, to involve an inventive step and to be industrially applicable.
